Terahertz generator

# Terastim Headband™

The Terastim series is a natural way to activate the body's own resources

Människans Resurser AB

# Terastim Headband

## Brain activator

The headband produces super weak terahertz waves, which act as a tuning fork for the blood vessels of the brain. It improves the condition of the blood vessels, making them more elastic, resulting in:

1. Improved blood circulation in the brain
2. Reduced tension in the area of the neck
3. Reduced stress
4. Deeper sleep
5. Improved cognitive abilities

When the blood circulation in the brain is improved, many other positive effects may occur - such as reduced headaches, normalization of blood pressure, improved memory etc.

## HOW TO USE

You use the headband by placing the logo „Terastim” against the forehead - the chip is on the opposite side of the logo, on the back of the head. This improves blood supply to the pituitary and the hypothalamus, which strengthens the body's regulatory mechanisms.

You use the headband 3 times per day, 15 min. per time. For headaches, you can wear the headband up to 30 min. per time.

**Contraindications: stroke, cerebral infarction.**

You can use hand washing for the headband.

**Manufacturer's warranty is 1 years.**
