TERASTIM FOOTTM

The Terastim series is a natural way to activate the body's own resources

Människans Resurser AB

TERASTIM FOOT REFLEXOGENIC ZONES ACTIVATOR

Terahertz therapy can be used with great efficiency to treat your feet and thus also affect the rest of the body. It has long been known that there are so-called reflexogenic zones underneath the feet.

These zones are interconnected with the whole body – all internal organs and body parts.

If there is a problem in any organ, it is reflected in the zone connected to this specific organ. It can appear for example as a tender point, induration or poor circulation. If we can activate these zones, the corresponding organs are affected very favorably, and often this treatment can be absolutely decisive for your health. This is exactly the kind of treatment we can achieve with Terastim foot.

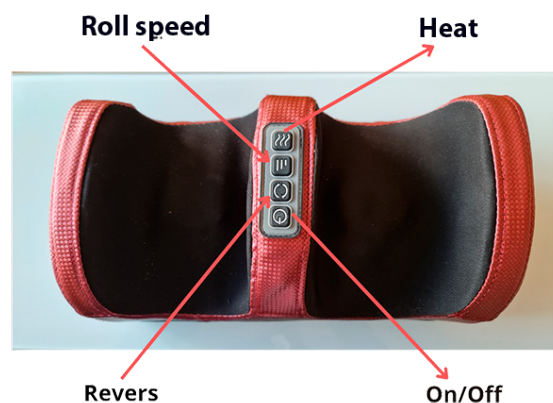

HOW TO USE

The device combines Terahertz waves with foot massage and mild heat.

The three modes of influence complement each other very well, and they unblock the zones that reflect bad organs or body parts. In addition, treatment with Terastim strengthens the entire body and prevents many different health problems.

We recommend using Terastim foot about 10-15 minutes at a time.

After 15 minutes, the device switches off automatically. You can benefit from treatment 2-3 times per day, but after 10 days of use, the body needs a break of 3-4 days.

If you are not a Northern European national, an inexpensive adapter marked for your country is required for this item.

Contraindications: The device should not be used in case of acute problems.

Technical specifications of the device: 45X28X28 cm, weight 3 kg, adapter 12 v, Power 24 w.

Warranty - 1 year.
